SmartiDP
Intelligent Document Processing

SMARTIDP EDMS

The intelligent platform for enterprise documents.

Capture, manage, automate, secure and govern every document across your enterprise — on one AI-powered, compliance-ready platform built for regulated and non-regulated industries.

BUILT TO SUPPORT

21 CFR Part 11 · EU GMP Annex 11 · ISO 9001 · ISO 13485 · ISO/IEC 27001 · GDPR · HIPAA · SOC 2 · ISO 15489 · eIDAS

AI-powered capture

Classify, extract and index automatically.

Process automation

No-code workflows and e-signatures.

Security & compliance

Built for Part 11, ISO, GDPR and more.

Open integration

APIs and connectors for your enterprise stack.

INDUSTRIES Life Sciences · Medical Devices · Healthcare · Financial Services · Government · Manufacturing & Energy · Legal

EXECUTIVE SUMMARY

Information is your enterprise's most valuable asset. Govern it.

Every strategic decision, regulatory submission, contract, product release and customer interaction depends on documents. Yet in most organisations, that content is scattered across file shares, inboxes, legacy systems and paper archives — slowing work, multiplying risk and hiding value.

SmartiDP EDMS unifies the complete document lifecycle on one secure, intelligent platform. AI-driven capture turns unstructured content into structured, searchable information. Configurable workflows automate reviews, approvals and records management. Security and compliance controls are built into every layer — so your organisation can move faster *and* stay audit-ready.

> **One platform. Every document. Complete control — from the moment content is created to the day it is defensibly disposed of.**

Built for decision-makers

- **CIOs & CTOs** — consolidate legacy repositories on a modern, cloud-native platform.
- **Quality Directors** — controlled documents, training and change control in one place.
- **Compliance & Regulatory Affairs** — audit trails, e-signatures and inspection readiness.
- **Enterprise Architects** — open APIs, microservices and flexible deployment.
- **Transformation Leaders** — paperless processes and measurable productivity gains.

12+
Global regulations & standards supported by built-in controls

360°
Document lifecycle coverage — capture to disposition

3
Deployment models: SaaS, private cloud and on-premise

100%
Of user and system actions captured in the audit trail

20 Why SmartiDP EDMS

From document chaos to intelligent information flow

Disconnected repositories and manual processes create hidden costs that compound every day. Modern enterprises need a single, governed foundation for content — one that people actually want to use.

Time lost searching

Knowledge workers repeatedly hunt for the latest version across drives, email and chat — or recreate documents that already exist.

Compliance exposure

Uncontrolled copies, missing audit trails and wet-ink signatures turn every inspection or audit into a high-stakes scramble.

Slow, manual processes

Paper routing, email approvals and re-keying data from documents delay releases, payments and decisions.

Security blind spots

Sensitive content sits in places IT cannot see, classify or protect — raising the risk of leaks and breaches.

Rising storage & legal risk

Without retention rules, content is kept forever — increasing cost, discovery scope and privacy liability.

Legacy system sprawl

Ageing, siloed ECM tools are expensive to maintain, hard to integrate and unable to support AI or cloud strategies.

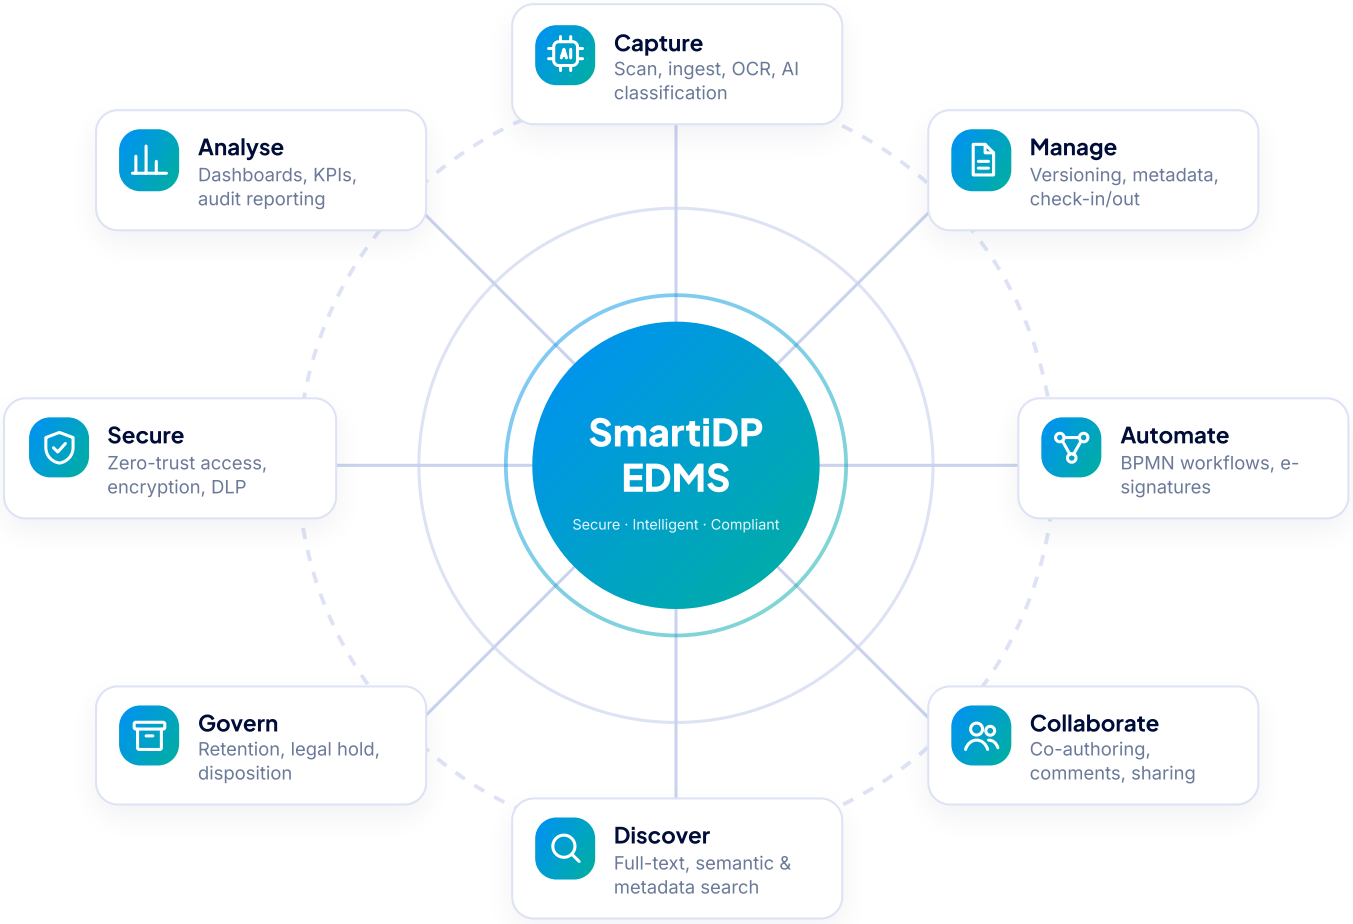

The transformation

DIMENSION	BEFORE	WITH SMARTIDP EDMS
Access	Multiple drives, inboxes and paper archives	One governed repository with instant, permission-aware search
Data entry	Manual typing from scanned documents	AI-powered classification and data extraction
Approvals	Email chains, printouts and wet-ink signatures	Automated workflows with compliant electronic signatures
Compliance	Evidence assembled manually before audits	Continuous audit trails and on-demand inspection packages
Records	Kept indefinitely or deleted inconsistently	Policy-driven retention, legal hold and defensible disposition
Insight	No visibility into process performance	Real-time dashboards and KPIs across every workflow

PLATFORM OVERVIEW

One platform for the complete enterprise information lifecycle

SmartiDP EDMS brings eight integrated capability domains together on a shared, secure foundation — so content flows seamlessly from capture to archive without switching tools.

Unified

One repository, one security model, one audit trail — across departments, sites and countries.

Intelligent

AI extracts meaning from content, automates classification and powers natural-language discovery.

Configurable

Adapt document types, metadata, workflows and rules through configuration — no custom code.

Shared platform services

Identity & access · Audit trail · Metadata & taxonomy · AI services · Notifications · Integration APIs · Encryption · Analytics

BUSINESS VALUE

Measurable outcomes across the enterprise

SmartiDP EDMS delivers value on four fronts at once: productivity, risk reduction, cost optimisation and better decisions. Typical improvement areas identified in business-case workshops include:

Faster
Document review & approval cycles through parallel electronic workflows

Less
Manual data entry via AI-powered capture and extraction

Lower
Paper, printing, courier and physical storage costs

Ready
For audits and inspections at any time, not just on audit day

Value for every stakeholder

ROLE	KEY PRIORITIES	HOW SMARTIDP EDMS HELPS
Chief Information Officer	Modernisation, cost control, risk	Retire legacy ECM, consolidate repositories and reduce infrastructure and licence sprawl.
Chief Technology Officer	Scalable, secure, cloud-ready architecture	Cloud-native microservices, open APIs and flexible deployment models.
Quality Director	Document control, training, CAPA	Controlled document lifecycle, training-on-release and change-control linkage.
Compliance Officer	Evidence, accountability, policy enforcement	Immutable audit trails, e-signatures, retention policies and compliance dashboards.
Regulatory Affairs	Submission readiness, version integrity	Version-locked document sets, PDF/A renditions and traceable approvals.
Enterprise Architect	Integration, standards, interoperability	REST APIs, webhooks, event streams, SSO and standards-based connectors.
Digital Transformation Leader	Paperless operations, adoption, speed	Intuitive UX, mobile access and no-code process automation.

BUSINESS CASE

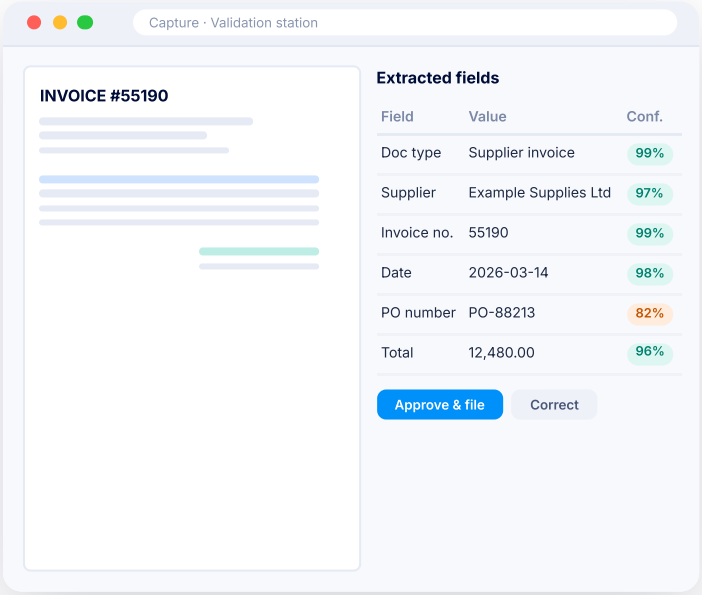

Our consultants build a quantified, organisation-specific ROI model with you — covering labour savings, cycle-time reduction, storage and licence consolidation, and compliance risk avoidance.

CAPABILITY · INTELLIGENT CAPTURE

AI turns unstructured content into structured information

Built on SmartIDP intelligent document processing, the platform ingests content from any channel, understands what it is, extracts the data that matters and routes it — automatically, with human validation where it counts.

1. **Ingest** — Scanners, email, upload, mobile, APIs, watched folders
2. **Enhance & OCR** — De-skew, clean-up, multilingual OCR and handwriting recognition
3. **Classify** — AI identifies document type and splits multi-document batches
4. **Extract** — Key fields, tables and entities captured with confidence scores
5. **Validate** — Business rules, lookups and human-in-the-loop review
6. **File & route** — Auto-indexed, secured and launched into workflow

Illustrative interface. Low-confidence fields are highlighted for review.

Capabilities

- **Omnichannel ingestion** from MFP scanners, shared mailboxes, mobile capture and system APIs.
- **AI document classification** trained on your document types — invoices, contracts, CVs, certificates, batch records and more.
- **Field, table and entity extraction** with configurable confidence thresholds.
- **Multilingual OCR**, including right-to-left scripts and handwriting (ICR).
- **Validation rules** against master data in ERP, CRM or HR systems.
- **Continuous learning** from user corrections to improve accuracy over time.
- **Searchable PDF/A output** for long-term preservation.

Document types processed out of the box

Invoices & receipts · Purchase orders · Contracts & agreements · Identity documents · CVs & HR forms · Certificates of analysis · Batch records · Delivery notes · Bank statements · Insurance claims · Correspondence · Engineering forms · + custom models trained on your documents

Touchless

High-confidence documents filed automatically without manual handling

Human-in-loop

Exceptions routed to reviewers with source highlighting

Traceable

Every extraction and correction recorded in the audit trail

CAPABILITY · DOCUMENT & RECORDS MANAGEMENT

Control every version. Trust every record.

A single source of truth for controlled documents and official records — with the governance needed to prove integrity throughout a document's entire life.

Version control

Major/minor versioning, check-in/check-out, redline comparison and automatic superseding of obsolete versions.

Metadata & taxonomy

Configurable document types, mandatory fields, controlled vocabularies and hierarchical file plans.

Enterprise search

Full-text, metadata and AI-assisted semantic search with permission-trimmed results and saved queries.

Controlled distribution

Read-and-acknowledge, controlled printing with watermarks and copy tracking, secure external sharing.

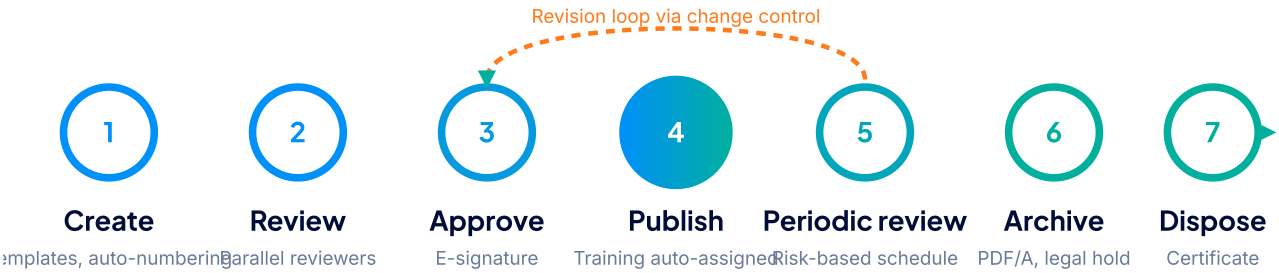

Records management

Record declaration, retention schedules, legal hold and certified disposition aligned with ISO 15489.

Multi-site & multilingual

Site-specific variants, translations linked to masters and multilingual user interface.

The governed record lifecycle

Single source of truth

Users always see the current effective version; superseded versions are withdrawn but retained for history and audit.

Defensible disposition

Multi-level approval before destruction, with a permanent certificate proving what was disposed of and why.

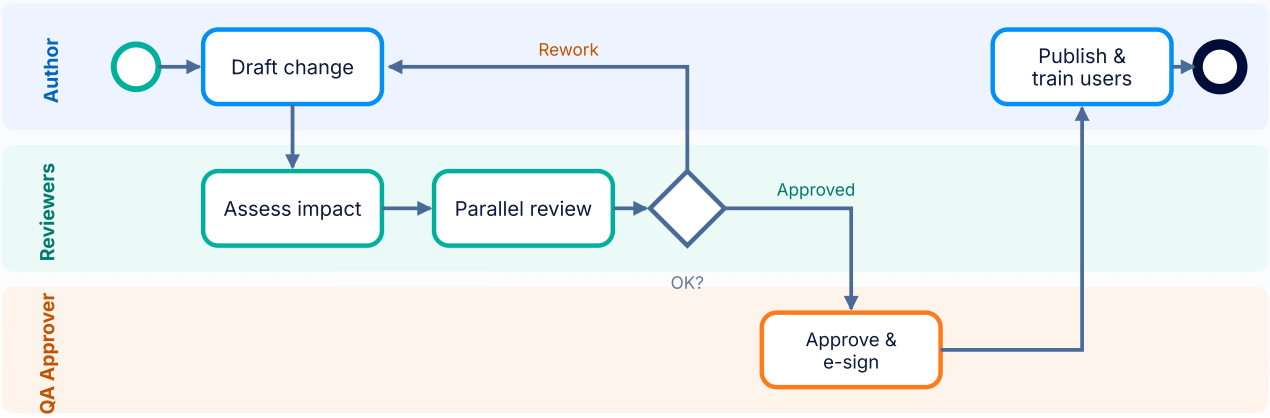

CAPABILITY · WORKFLOW & PROCESS AUTOMATION

Automate the process, not just the document

A visual, no-code workflow designer lets business owners model reviews, approvals and end-to-end processes — while the engine enforces sequence, segregation of duties and service levels.

Example: Controlled document change process

BPMN 2.0

Visual designer

Drag-and-drop modelling with serial, parallel and conditional routing — versioned and testable before release.

Electronic signatures

21 CFR Part 11 and eIDAS-aligned signing with re-authentication and signature meaning.

SLAs & escalation

Due dates, reminders, delegation and automatic escalation keep work moving.

Segregation of duties

Rules prevent authors approving their own work and enforce qualified approvers.

Event-driven automation

Trigger workflows from capture, metadata changes, dates or external system events.

Process analytics

Track cycle times, bottlenecks and workload to continuously improve processes.

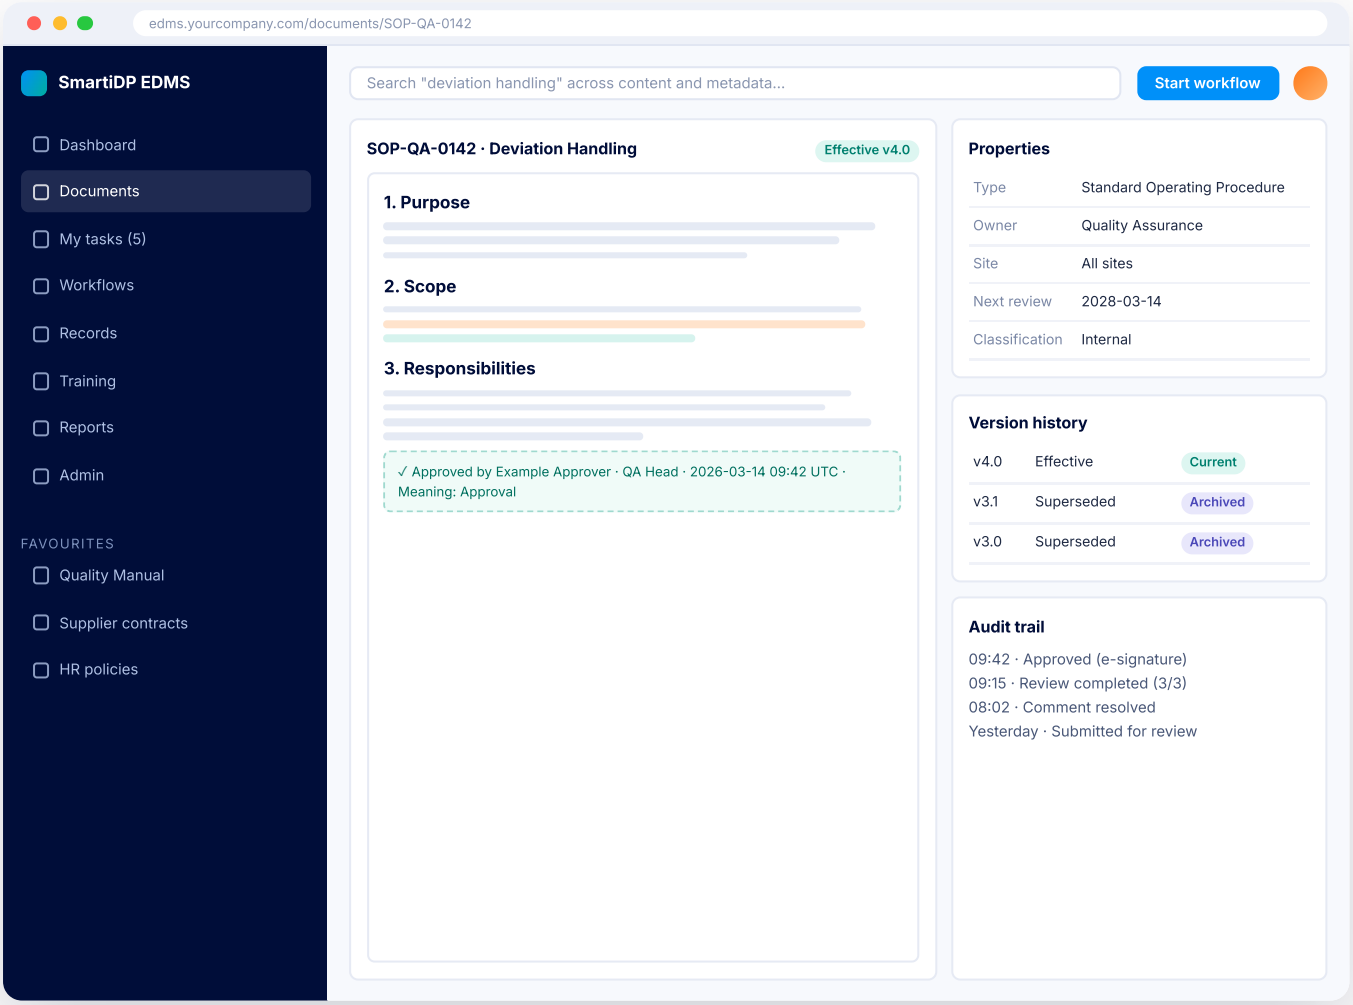

Ready-to-use workflow templates

- Document change control
- Periodic review
- Contract approval
- Invoice approval
- Employee onboarding
- CAPA & deviation
- Policy attestation
- Records disposition

USER EXPERIENCE

Designed for people, loved by power users

Adoption makes or breaks any EDMS. SmartiDP EDMS offers a clean, modern interface that feels familiar from day one — with the depth that document controllers and administrators need.

Illustrative product interface. Sample data shown.

Find in seconds

Type-ahead, filters and AI-assisted semantic search.

View anything

In-browser viewer for 100+ formats with annotations.

Task-centric inbox

All reviews, approvals and training in one place.

Accessible & global

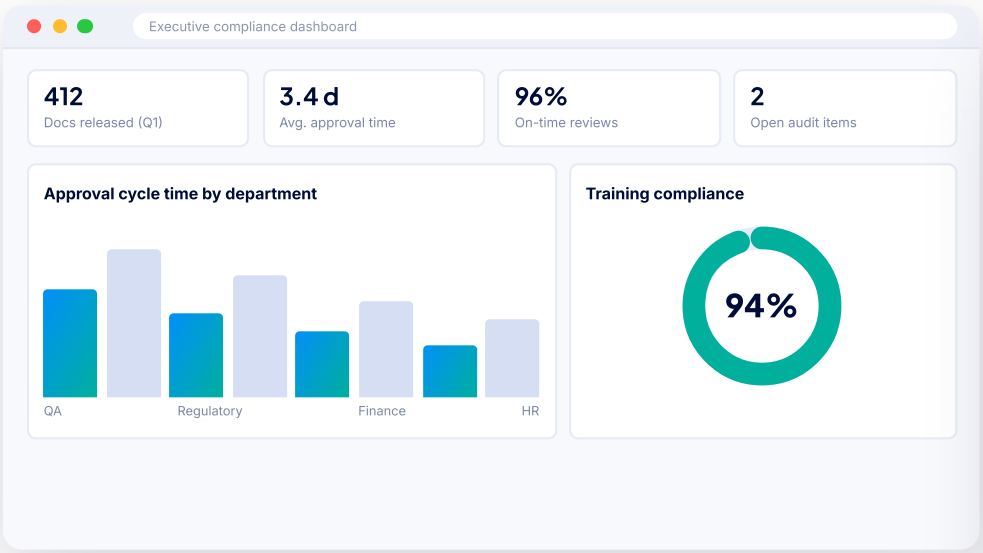

WCAG 2.1 AA design and multilingual UI.

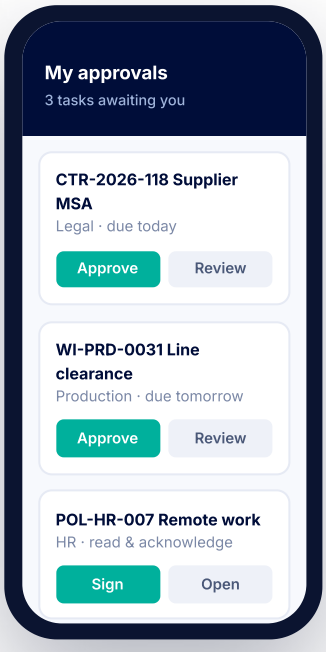

> Role-based home pages give every user exactly what they need — and nothing they don't.

PRODUCTIVITY ANYWHERE

Work where you are — desktop, Office, mobile

Bring governed document management into the tools people already use every day, and let decision-makers act from anywhere without compromising control.

Microsoft 365 & Office

Open, edit, save and check in from Word, Excel, PowerPoint and Outlook; file emails with one click.

Real-time collaboration

Co-authoring, threaded comments, @mentions and review annotations — all captured with the record.

Mobile & offline

Responsive web and mobile apps for search, viewing, approvals and e-signatures on the go.

Secure external sharing

Share with partners, suppliers and regulators via expiring, watermarked, audit-tracked links.

Dashboards & reports

Role-based dashboards and scheduled reports for managers, QA and executives.

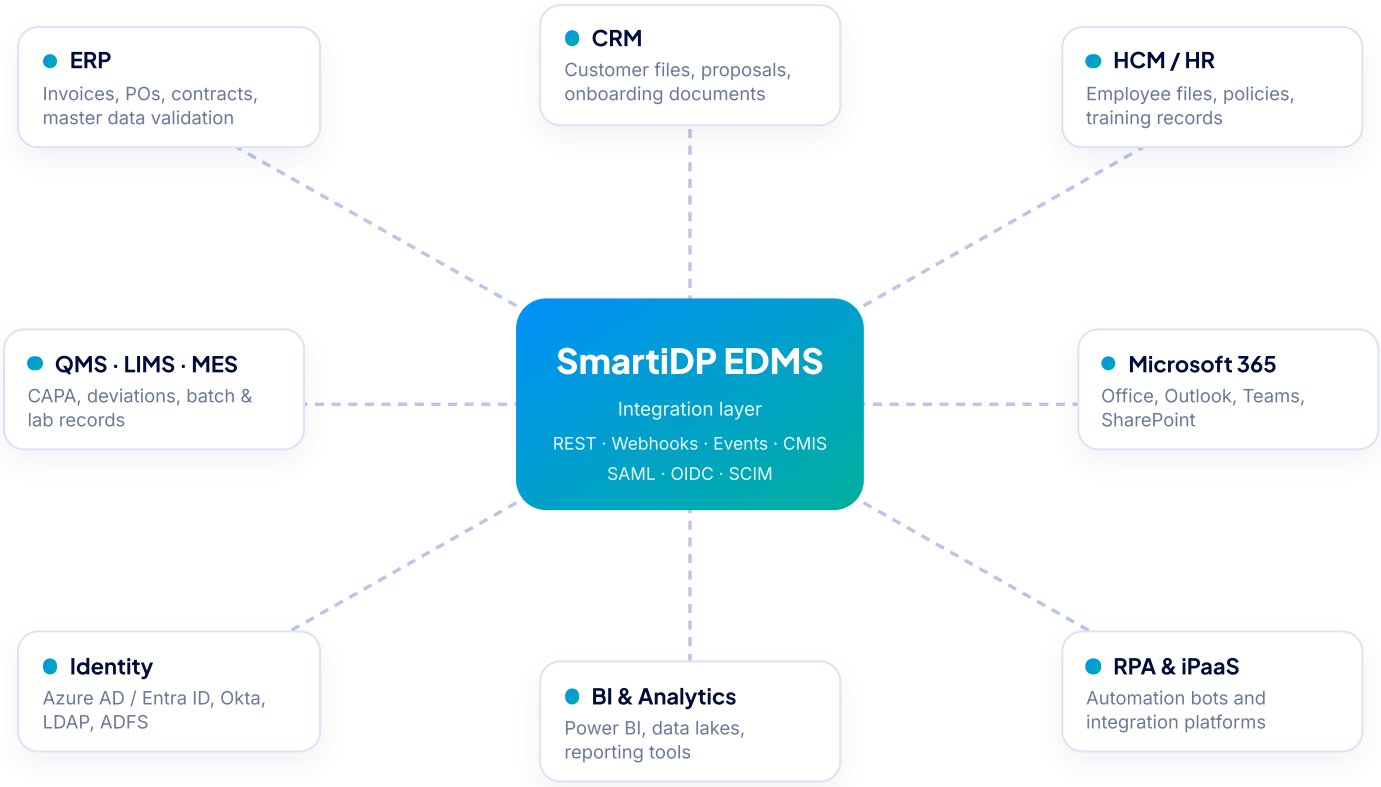

AI assistant

Summarise documents, compare versions and ask questions across permitted content in natural language.

INTEGRATION

Connected to your enterprise ecosystem

An API-first design lets SmartiDP EDMS act as the content backbone for your business applications — so documents follow the process, wherever it runs.

Open APIs

Documented REST APIs (OpenAPI) covering all platform functions.

Events & webhooks

Real-time notifications to drive downstream processes.

Connectors

Pre-built and configurable connectors for common systems.

Migration toolkit

Bulk, checksum-verified migration from legacy ECM and file shares.

Common integration patterns

Link documents to records

Attach governed documents to ERP, CRM or HR records and view them in context without leaving the business application.

Process-triggered automation

Business events — a new supplier, a goods receipt, a new hire — automatically generate, request or route documents.

Archive for business apps

Offload attachments and outputs from operational systems into compliant, retention-managed storage.

Product and company names are trademarks of their respective owners and are shown as examples of commonly integrated systems. Specific connector availability should be confirmed for your environment.

PLATFORM ARCHITECTURE

Cloud-native architecture, enterprise-grade by design

A modular, service-oriented architecture separates concerns into independently scalable layers, with security, audit and observability applied consistently across all of them.

Flexible deployment models

SaaS

Fully managed, continuously updated, fastest time to value. Regional data residency options.

Private cloud

Dedicated single-tenant environment in your preferred cloud region and account.

On-premise

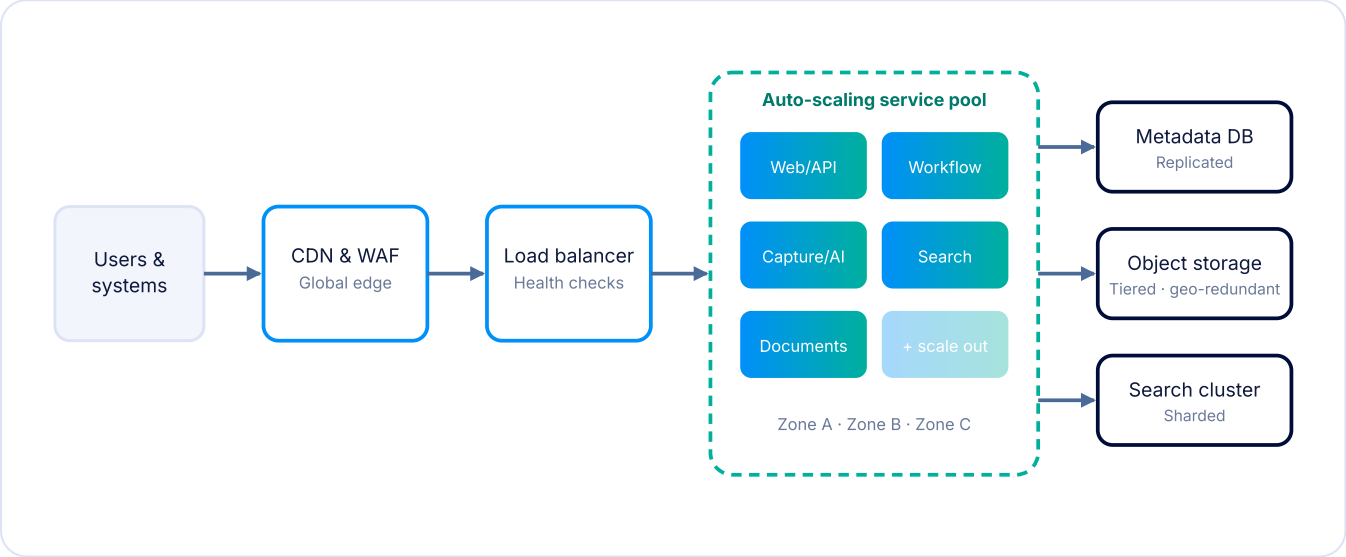

Deployed in your data centre for maximum control, sovereignty or air-gapped needs.

Open standards: REST / OpenAPI · OAuth 2.0 / OIDC · SAML 2.0 · SCIM · CMIS · BPMN 2.0 · PDF/A · Containers / Kubernetes

SCALABILITY, PERFORMANCE & AVAILABILITY

From one department to a global enterprise

The platform scales horizontally with demand — more users, more documents, more sites — without re-architecture, while high-availability design keeps critical content accessible around the clock.

Elastic
Horizontal auto-scaling of each service independently

HA
Multi-zone redundancy with automated failover

DR
Geo-redundant backups with defined RPO / RTO

SLA
Contractual availability commitments for SaaS

Performance engineering

- Asynchronous processing for capture, rendition and indexing.
- Distributed caching and CDN delivery of previews.
- Streaming upload/download for very large files.
- Continuous load and performance testing in every release.

Built for volume

- Designed for very large repositories across many sites.
- Tiered storage moves inactive content to lower-cost tiers.
- Bulk import and batch operations for migrations.
- Real-time observability with proactive alerting.

Multi-region
Deploy close to your users, with data kept in the regions you choose.

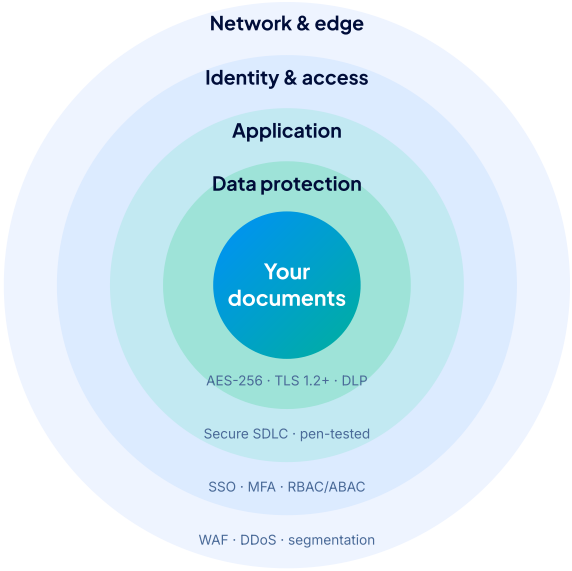

Multi-site
Shared global standards with local site variants and administration.

Zero-downtime updates
Rolling deployments keep the platform available during upgrades.

SECURITY

Zero-trust security, defence in depth

Every request is authenticated, authorised and logged. Multiple concentric layers of protection safeguard your content — from the network edge to the individual document.

Identity & access

SAML 2.0 / OIDC SSO, MFA, SCIM provisioning, role- and attribute-based permissions to document level.

Encryption

AES-256 at rest, TLS 1.2+ in transit, managed keys with rotation and optional customer-managed keys.

Data loss prevention

Classification-driven watermarks, download/print restrictions and expiring share links.

Threat detection

Anomaly alerts, malware scanning on upload and SIEM log streaming.

Integrity

SHA-256 content hashing and tamper-evident, hash-chained audit trails.

Secure engineering

Code review, SAST/DAST, dependency scanning and independent penetration testing.

Privacy by design

PII detection, redaction, purpose-bound retention, data-subject request workflows and regional data residency.

Privileged access control

Just-in-time admin elevation; administrators cannot silently alter content or audit logs.

Resilience

Immutable, encrypted backups with regular restore testing and documented recovery plans.

Security operations

24/7
Security monitoring and alerting for SaaS environments

Least
Privilege by default for users, services and administrators

Tested
Independent penetration testing and vulnerability management

Logged
Security events streamed to your SIEM in real time

COMPLIANCE FRAMEWORK

One control set, many regulations

Rather than building separate solutions for each regulation, SmartiDP EDMS implements a common set of compliance controls that map to the requirements of major global frameworks.

Life sciences (GxP)

Key requirements, built-in controls

Highlights of how core regulatory requirements are implemented in the platform.

REQUIREMENT	REFERENCE	PLATFORM CONTROL
Secure, time-stamped audit trails	Part 11 §11.10(e) · Annex 11 §9	Append-only, hash-chained audit service records user, UTC time, action, old/new values and reason for change. No user can edit or delete entries.
Electronic signatures	Part 11 §11.50–11.200 · eIDAS Art. 25–26	Two-component re-authentication, displayed signature meaning, cryptographic binding to the exact signed version; optional PKI and qualified signatures.
System validation	Part 11 §11.10(a) · Annex 11 §4 · GAMP 5	Validation accelerator: URS templates, risk assessment, traceability matrix, IQ/OQ evidence and release impact notes.
Access control	Part 11 §11.10(d,g) · ISO 27001 A.5.15 · HIPAA §164.312(a)	SSO + MFA, RBAC/ABAC, server-side authorisation of every action, automatic session timeout.
Document control	ISO 9001 §7.5 · ISO 13485 §4.2.4	Review and approval before release, revision status, obsolete-version withdrawal, external document register.
Records retention & disposition	ISO 15489 §8.6, §9.9 · GDPR Art. 5(1)(e)	Retention schedules, legal hold, multi-level disposition approval and destruction certificates.
Data integrity (ALCOA+)	FDA, MHRA, PIC/S guidance	Attributable actions, server timestamps, preserved originals, hash verification, complete version history.
Data-subject rights	GDPR Art. 15–20	DSAR workflow to find, collate, redact, export or erase personal data — respecting legal holds.
Security of processing	GDPR Art. 32 · SOC 2 CC6 · NIST SC-8/28	Encryption in transit and at rest, monitoring, resilience and regular independent testing.
Backup & continuity	Annex 11 §7, §16 · ISO 27001 A.8.13	Encrypted, geo-redundant backups, tested restores and documented disaster-recovery plans.

Shared responsibility: the platform provides technical controls and validation evidence; customers maintain procedures, training, configuration governance and performance qualification.

REGULATED INDUSTRIES

Purpose-built for industries where compliance is critical

Pre-configured solution templates accelerate deployment with industry-specific document types, workflows, metadata and retention rules.

Pharmaceuticals & Biotech

Use cases: SOPs, batch records, validation documents, regulatory submissions, CMC, training records.

21 CFR Part 11 · EU Annex 11 · GAMP 5 · ICH Q10 · ALCOA+

Medical Devices

Use cases: Design history files, technical documentation, device master records, risk files, CAPA.

ISO 13485 · FDA QMSR · EU MDR / IVDR · ISO 14971

Healthcare

Use cases: Patient records, consent forms, clinical policies, accreditation evidence, HR credentials.

HIPAA · GDPR · ISO 27001 · national health-data laws

Banking, Financial Services & Insurance

Use cases: KYC/onboarding, loan files, policies, claims, board papers, regulatory reporting.

SOC 2 · ISO 27001 · GDPR · record-keeping & AML regulations

Government & Public Sector

Use cases: Case files, correspondence, permits, procurement, public records and archives.

ISO 15489 · ISO 16175 · NIST SP 800-53 · data sovereignty

Manufacturing, Energy & Utilities

Use cases: Engineering drawings, work instructions, HSE documents, asset and maintenance records.

ISO 9001 · ISO 14001 · ISO 45001 · IATF 16949

Legal & Professional Services

Use cases: Matter files, contracts, e-discovery, client correspondence, precedent libraries.

GDPR · legal hold · eIDAS / ESIGN · confidentiality controls

Laboratories & CROs

Use cases: Study protocols, lab notebooks, certificates of analysis, method validation, TMF.

GLP · GCP · ISO/IEC 17025 · 21 CFR Part 11

Every industry solution template includes

Document types
Pre-defined types, metadata and numbering schemes.

Workflows
Industry-standard review, approval and change processes.

Retention rules
Starter retention schedules aligned with common requirements.

Compliance pack
Control mappings and validation documentation.

CROSS-INDUSTRY USE CASES

Value in every department, in every industry

Beyond regulated content, SmartiDP EDMS digitises and automates the document-heavy processes found in every organisation.

Finance — Accounts payable

Capture invoices from any channel, extract data, match to POs in ERP and route for approval — reducing manual entry and late-payment risk.

Legal — Contract lifecycle

Templates, negotiation, approval, e-signature, obligation tracking and renewal alerts in one governed repository.

HR — Digital employee files

Onboarding packs, policies with read-and-acknowledge, confidential personnel files and retention by employment status.

Engineering — Drawings & specs

Revision-controlled drawings, specifications and change orders linked to products and assets.

Procurement — Supplier management

Supplier qualification documents, certificates with expiry alerts, agreements and audit reports.

Customer service — Correspondence

Inbound mail and email classified and routed to the right team, linked to customer records in CRM.

Corporate — Policies & governance

Board papers, policies and procedures with controlled publication and attestation campaigns.

IT — Knowledge & ISMS evidence

Runbooks, architecture records and ISO 27001 evidence maintained with ownership and review cycles.

Records office — Digitisation

Back-file scanning projects converting paper archives into searchable, retention-managed digital records.

Start small, scale fast

Many customers begin with a single high-impact process — such as accounts payable or SOP management — then expand across the enterprise on the same platform, reusing security, metadata and integrations.

Pilot ▶ Department ▶ Enterprise

IMPLEMENTATION & CUSTOMER SUCCESS

A proven path from kick-off to value

Our implementation methodology combines agile delivery with the documentation rigour regulated organisations require — reducing risk and accelerating time to value.

1 **Discover**
Process workshops, requirements, success KPIs and business case.

2 **Design**
Information architecture, metadata, security model and workflows.

3 **Configure**
Iterative configuration and integration with fortnightly demos.

4 **Validate**
Risk-based testing, IQ/OQ/PQ support and user acceptance.

5 **Migrate**
Verified migration of legacy content and metadata.

6 **Go live**
Training, change management and hyper-care support.

7 **Optimise**
KPI reviews, adoption analytics and roadmap planning.

Validation accelerator
Pre-written URS, risk assessment, traceability matrix and test scripts reduce validation effort for GxP customers.

Change management & training
Role-based training, train-the-trainer programmes, e-learning content and adoption campaigns.

Support & success
Tiered support plans, named customer success managers and regular health checks.

What you can expect

Weeks
to launch an initial process using solution templates

Agile
delivery with visible progress every sprint

GxP
documentation rigour for validated environments

24/7
platform monitoring for SaaS deployments

Services portfolio

Advisory
Information governance strategy, process redesign and roadmap planning.

Migration
Legacy ECM, file share and paper archive migration with verification reports.

Managed services
Ongoing administration, configuration changes and validated-state maintenance.

Training academy
Administrator, power-user and end-user curricula with certification.

Success is not go-live — it is lasting adoption and measurable business outcomes.

Every engagement is measured against the KPIs agreed in the Discover phase.

SmartiDP
Intelligent Document Processing

WHY SMARTIDP EDMS

Ready to transform how your enterprise manages information?

AI at the core
Intelligent document processing built in — not bolted on.

Compliance-ready
Controls mapped to 12+ global regulations and standards.

Built for adoption
Modern UX across web, Office and mobile.

Configurable
No-code workflows, metadata and rules.

Open & integrated
API-first platform for your enterprise stack.

Deploy your way
SaaS, private cloud or on-premise.

See SmartiDP EDMS in action

Book a personalised demonstration tailored to your industry, processes and compliance requirements.
